

# Mike's Bot Setup — Read Me First

Hi Mike. Here's what to do.

## Before you start

You'll need:

- This laptop, plugged in
- Your phone with Telegram installed
- An email address you can check
- About 1 to 2 hours (most of it is waiting on downloads)
- Shands' phone number, in case anything weird happens

## Step 1 — Put these files on the Desktop

You should have three files. Put all of them in the **same folder** somewhere easy to find (Desktop is fine):

- `Setup-MikeBot.bat` ← the one you'll double-click
- `Setup-MikeBot.ps1`
- `Setup-MikeBot-Diagnostic.ps1`

## Step 2 — Run the setup

**Double-click** `Setup-MikeBot.bat`

Windows will ask "Do you want to allow this app to make changes?" → Click **Yes**.

A black window opens with white and colored text. That's the setup script. It will walk you through everything from here. Just follow the prompts.

## If the black window closes unexpectedly

Just double-click `Setup-MikeBot.bat` again. It remembers where you stopped and will

offer to resume.

## If something looks weird or scary

**Don't guess.** Take a screenshot (Windows key + Shift + S) and text it to Shands.

Things that look scary but are NORMAL:

- A "Are you sure?" prompt from Windows when you double-click the .bat file → click Yes
- Long pauses (1–10 minutes) during installs with nothing on screen → just wait
- Red text labeled [!] → those are *warnings*, not errors, usually fine
- A SmartScreen "Windows protected your PC" warning → click "More info" then "Run anyway"

Things that mean STOP and text Shands:

- Anything that asks for a credit card *before* you get to the DeepSeek website
- Any prompt about turning off antivirus or Windows Defender
- A blue screen
- The script asks a question that doesn't match the answers in its own instructions

## After it's done

You'll be able to text your bot from Telegram on your phone, and it will reply.

Good luck. — Shands
